PRINTED IN U.S.A.

SIMPLICITY MANUFACTURING COMPANY / PORT WASHINGTON, WIS.

1268

ASSEMBLY

The cart enclosure for the vacuum collector consists of a metal framework and a canvas cover, all of which fits on the dump cart body. Here follows step by step illustrations showing the sequence of assembly for this unit.

A. The enclosure should be constructed on the cart body, starting with the lower channel members shown in Figure 1. The front support assembly is then added as shown in Figure 2. (Refer to the exploded view and parts list on Pages 8 & 9 for descriptions of the hardware used in this construction).

B. Thread the canvas enclosure over the rear support assembly as shown in Figure 3, and place the other end of the canvas over the front support assembly as illustrated.

C. Now complete the frame construction by attaching the braces to each of the four corners as shown, using the appropriate hardware as called out on the parts list.

D. Figure 4 shows the insertion of the side reinforcing members into the slots at the sides of the canvas enclosure. Secure these in place on both sides as shown in Figure 5, with the capscrews and attaching hardware provided.

E. Insert the front reinforcing member into the slot at the front edge of the enclosure, and attach the catch bracket in the center as shown in Figure 6. The catch is secured with a lock nut which should be tightened just enough to hold securely but still allow pivoting.

F. Attach the upper hanger brackets to the rear support frame as shown in Figure 7. The lower latches on the rear frame support are then attached with the appropriate hardware as called out in the exploded view and parts list. Check to see that the latches are secure, but still free to pivot.

G. The rear door is constructed by inserting the rear frame into the slots in the rear canvas. The bottom reinforcing rod is then inserted in the bottom canvas slot, and is secured in position by means of the nuts and washers provided. See Figure 8. The reinforcing strap is positioned over the lower outside portion of the door as shown in Figure 9, and is secured in place with the capscrews, spacers and attaching hardware called out on the exploded view and parts list. Attach the upper latching stud assemblies to the holes provided in the upper part of the door frame as shown in Figure 8, then position the top edge of the canvas over the top of the door frame as shown.

PACKING

For use of shipping the Vacuum Collector is packaged in two cartons. The long carton contains the two hoses. The large carton contains the blower unit with the Engine hitch, metal frame and a canvas cover for the dump cart.

ASSEMBLY

Replace Draw Bar Hitch Clip from Draw Bar Bracket with the hitch provided. See Figure 14. (Use same hardware). Attach deflector to top of Blower Housing by two screws provided. See Figure

ENGINE

Service Engine according to manufactures instructions before operating.

COLLECTOR & BLOWER HOUSING
